### **NOTES**

Computer Programmer and the Data Processing Team have been working so hard to revised the data over and over again before it was finalized. Since this is the first survey of its kind to be conducted in Samoa and the ILO standard questionnaire was adopted, a lot of new variables have been derived from the data and imputed in order to contextualise to the local text, perhaps make some sense to the analysis

## Overview

# Sampling

## Sampling Procedure

---

The sample was design to cover 10 percent of the households in both urban and rural ares. A representative probability sample of households was selected in two stages. First stage involved the selection of clusters or primary sampling units using probability proportaional to size(PPS) resulting in a total of 341 clusters of which 119 clusters were selected from Apia Urban Area, 94 in North West Upolu, 63 in Rest of Upolu and 65 in Savaii.The first region is located in the urban area, while all others are in the rural areas of Samoa.

In the LFS 2012, a representative probability sample of households was selected in two stages. The first stage involved the selection of clusters or primary sampling units using probability proportional to size (PPS) resulting in a total of 341 clusters of which 119 clusters were selected from AUA, 94 in NWU, 63 in ROU and 65 in Savaii. In the second stage of selection, a fixed number of 5 households were selected systematically from the AUA clusters and a fixed number of 10 households were selected from all the rural regions due to the higher transportation costs in those regions. This resulted in a total of 592 selected households in AUA, 948 in NWU, 617 in ROU and 641 in Savaii or 2,798 sample households in total. Any difference in the final numbers will be due to household found and responding households.

## Response Rate

---

LFS Response Rate is 91%

## Weighting

---

During the LFS, in each of the selected households, all persons in the household were interviewed hence the weighting was based on the responding households in the sample or household weights.

### Data Collection Notes

A separate training/ discussion was conducted for three days from 10th October 2012 - 12th October 2012 for supervisors to make them aware of the survey tools, to provide support to the enumerators on the field on an ad hoc basis and to discuss any issues arising from the survey questionnaire. Furthermore, members of the steering committee were also invited to attend so that they understood the questionnaire fully.

A two week training of enumerators together with field supervisors followed and was conducted for two weeks from 16th October 2012 - 26th October 2012. Six days were spent on discussing administrative logistics, role of enumerators and supervisors, the training of the questionnaire, reading and understanding household lists and aerial maps designed by the bureau, explaining and clarifying key concepts used in the survey as per ILO definitions and discussing issues arising from the questionnaire. One day was spent on group discussions to identify any additional issues. The remaining two days were spent on practical exercises where one enumerator was an interviewer and the other was the respondent. All other enumerators were encouraged to record the answers of the interview which were discussed after each interview.

On October 27th 2012, a pilot test was conducted in a rural village, Samatau, located approximately 30km from the capital of Apia. Four teams of six comprising of five enumerators and one supervisor were dispersed in the morning and each enumerator was encouraged to interview at least two households. Supervisors were asked to manage the field logistics of its respective team.

The interviewed results from the pilot survey were discussed for four days from 29th October - 1st November. In addition to this, data entry for the pilot survey to test the data entry program designed for the survey started on 30th October and completed on 5th November. The results of which were made known to everyone on 2nd November. Numerous and various aspects of the questionnaire needed improvement which were further reiterated and reemphasized. Furthermore, field work plan and logistics, team allocation and a brief summary of the survey was also done on 2nd November.

A total of four field teams were used for collecting the data during the field work and each team consisted of one supervisor and five enumerators. The field work was conducted for six consecutive weeks from 5th November 2012 - 15th December 2012, where Upolu was enumerated from 5th November 2012 - 5th December 2012 and Savaii was enumerated from 7th December - 15th December 2012. Two field teams were assigned each geographical region to carry out the interviews while the other two teams shared the remaining geographical region in Upolu due to the workload and travelling time. All the field teams enumerated the Savaii region due to travelling time resulting from the geographical scatteredness of the selected households.

### Supervision

The survey consisted of four field supervisors, one from the Ministry of Commerce, Industry and Labour and three from the

Bureau itself. Each was assigned a team to manage and to supervise the field work.

There were thirty two applicants that applied to be enumerators and twenty eight were interviewed. Of this total, twenty enumerators were selected based on strict selection criteria's that were designed by the steering committee.

A total of four field teams were used for collecting the data during the field work and each team consisted of one supervisor and five enumerators. . Each team used a 4 wheel drive vehicle to travel from cluster to cluster (and where necessary within cluster).

Survey Manager was responsible for regular visits on the field to keep track of the work and help out eliminating possible field work errors.

## Data Processing

### Data Editing

---

Four data entry operators were hired for a total of seven weeks from 21st January - 8th March 2012 for data entry. Two were retained for a period of one week from 11th March - 15th March for data cleaning and editing. The data entry activity was supervised by a locally hired computer consultant in collaboration with one officer from the bureau.

This local computer consultant was also hired to design a data entry program, a data processing system for the survey and for producing the necessary tables according to the tabulation plan. The Census and Survey Processing System (CSPRO 5.0) package was used for managing both the data entry and data processing which was also used to produce the required tables for the survey.
